- Primary Pour Points
- Secondary Pour Points
- Denotes Infiltration
- City limits
- Lidar Contour
- Open Channel
- Culverts
- Pipes
- River/Streams
- Lakes/Ponds
- Bypass

#### Notes:

Redmond's Primary Watersheds are subdivisions of the Sammamish watershed that drains to Lake Washington. Each watershed is defined by a group of streams, pipes, and topographic features that drain to a discrete location (Pour Point) where the water "pours" into Lake Sammamish or the Sammamish River. Some watersheds are further subdivided (i.e. watershed 490, the largest watershed in Redmond is divided into secondary watersheds with secondary pour points that all drain to Bear Creek)
